

Slips Trips Falls

the Winter 3

SAFETY
CINEMA™
poster

With winter comes the slippery stuff. . . the cold and ice and snow.

- In parking lots
- On sidewalks
- On steps

Slips in the winter are primarily caused by. . .

- A slippery surface
- Wearing the wrong footwear
- Distraction

Here is what you can do. . .

CHANGE THE SURFACE!

Surfaces are often more slippery than you think!

- **Spread sand and/or salt** on icy surfaces, on walkways, work areas, and steps.
- **Consider delaying the activity** until conditions improve, if the weather is particularly bad.
- **Keep steps and equipment clean and dry.** Take the time to clean off mud, ice, snow, and other debris.

CHANGE YOUR SHOES!

Wear shoes or boots with. . .

- **Flat, low heels**
- **Slip-resistant soles** to reduce slipping hazards
- **Good tread** that helps to grip the surface

CHANGE YOUR WALK!

- **Walk slowly and carefully.**
- **Avoid rapid changes in direction.**
- **Go where you are looking. . .** look where you are going.
- **Never carry materials which obstruct your view,** or throw you off balance. That means smaller loads and more trips.
- **Remove your sunglasses** in low-light areas.
- **Use handrails. . . ALWAYS!**
